

This is the High-level design file contains, the High -level requirements, services, and the required ports for it.

- Linux
- Apache or Ngnix
- PHP V 7.4
- Database: MySQL V 8.x
- Firewall like (sucuri)
- web server (cPanel)
- SSL certificate
- port 443
- port 8080
- phpMyAdmin latest version

Recommendations

- Host the DB in a separate host from the backend app., and provide us with the connection configuration of it.
- Host the web app in another host, and make the backend host accept requests from it. which means enabling "CROS" access.
- Install a Firewall on the host.

Hosting Company:

- STC
- Mobily
- Oracle
- AWS Saudi Arabia
